Storent

Storent is a e-rental platform which lets the user to rent other people's unused spaces for a price . The system is usable when someone becomes a registered member to the system . There are two options for a user . One is to provide spaces , one for the customers who'll use the space for a certain amount of time . One who'll provide space makes a request with information via system and needs to wait up to 24 hours for confirmation till a Storent agent confirms the validity of the offerings . An user needs to select the Storage Type which are of large , medium and small . There is also advanced options for the selection if someone needs spaces for a particular object . After selecting Booking Type – Pre Book or Instant , an user is requested to provide the time they need to rent for the space . After selecting required field , the system performs an automated search and the best results that matches the information provided by an user . Customer can see the available places with a green icon if available , bell icon if the place is needed by more than one person and there is a bidding options of 5 minutes for pre book and 2 minutes for instant booking , and unavailable places are in red mark . After selecting a place , one can see the information about the place . Then a user confirms the place for renting and is taken to the payment phase . Here , the overall pricing is shown to a user . After making the payment by mobile banking or by card or Storent Recharge balance - the user is given the phone number who is in charge of the place and an unique Storent code which is valid for the booked time . An user can also increase the time if they wants to during a renting period , in that case – Storent charges of 10% is applicable . Premium users are out of this charges and gets priority when bidding for a place !
